To whom it may concern,

Good afternoon. This is in reference to the qualifications of Patterson House Moving for moving structures. Let me first start off by letting you know that we are the leading manufacturer in building custom hydraulic systems for the moving industry. Our company has been in business for 22 years and I have been involved in the industry for over 45 years. On a daily basis, we are constantly in tune with what goes on around the country from coast to coast with jobs, what movers are doing, and who is doing them.

Patterson Moving in the last couple years has made giant steps in becoming a mover who seems qualified to do anything he sets his mind to. He has purchased some of the most high tech equipment our industry has to offer today (2- ball valve, diesel powered, 12 jack unified machines, Spring return crib jacks, and many tee and junction manifold systems). What we are able to observe for a reference would be some of his recent jobs he has taken on and completed, which also have become award winners for the IASM association and are featured in the 2 magazines that are published for the house moving industry. Among the jobs he has done and the equipment he owns, I would put Patterson Movers in among the top 5% category for movers in business today.

Sincerely,
